

## Idea

StakeNet is a decentralized platform with his own blockchain which runs on Lightning Network and is powered by his own native currency named XSN. Besides regular PoS consensus mechanism the project offers the world's first Trustless Proof of Stake (TPoS) which allows users to easily and safely stake their XSN via cold wallet storage. Currently there is also a new and innovative technology under development which is called Cross Chain Proof of Stake (CCPoS) which means that in the future all coins compatible with the Lightning Network will be able to be staked through the XSN system.

## Team

StakeNet is an open source project and every contributor has the opportunity to be listed as a part of the team on stakenet.io so their team section doesn't give any information about the exact team size. It is stated that there are currently over 40 people who are actively working in the Stakenet ecosystem, mainly tech-focused.

## Roadmap

They have a very detailed roadmap on their homepage and you can follow the progress of every single milestone by a progress bar. Unfortunately the roadmap for 2019 hasn't been revealed yet but a few milestones currently under development are:

- CCPoS
- Enhanced Privacy
- Autonomous Swaps between different blockchains by Masternodes
- Staking from Ledger Nano S
- XSN Hardware Wallet

## General Stats

Current Supply	75,395,469 XSN
Total Supply	83,721,602 XSN
Market Cap	7,709,617.00\$
All Time High	0.89\$

## Masternode Stats

Required coins	15,000 XSN [currently ~1.534\$]
Coins locked	25,635,000 XSN [34.00%]
Active Masternodes	1709
Current ROI [annual]	17.83% / 2047 days
