## Idea

Wagerr offers a P2P sports betting platform based on blockchain technology. Due to its decentralized structure it doesn't rely on trusted authorities and therefore offers, among other things, a high level of security and lower fees than existing platforms. A new type of smart contracts called Application Specific Smart Contracts (ASSC) is used to process all the bets and a 2nd layer network consisting of so called Oracle Masternodes is constantly validating results and forging the betting contracts. The special thing about Wagerr is the value coupling mechanism. While 50% of the betting fees go to the masternodes and 2% into the development of the platform, 48% of the fees are destroyed and as a result the coin supply decreases. So the more bets you place, the higher the token price will be.

## Team

There is currently no more mention of a name of one of the team members on their homepage, probably due to privacy reasons. So you can hardly estimate how much people are working behind the scenes and you won't find much information in the web.

## Roadmap

There is a detailed roadmap on their homepage that extends to mid-2019 even if you can't see the exact progress here. The next steps according to their roadmap will be:

- Dynamic Odds
- Fantasy Sports
- Live Betting

## General Stats

Current Supply	236,470,545 WGR
Market Cap	14,700,090.00\$
Current Token Price	0.062\$
All Time High	0.93\$

## Masternode Stats

Required coins	25,000 WGR (currently -1,554\$)
Coins locked	66,625,000 WGR (28.17%)
Active Masternodes	2,665
Current ROI (annual)	6.33% / 5766 days
